

GET THE PREHEAT SYSTEM THAT RUNS ON ALL CYLINDERS.

Preheating improves safety and extends the life of your expensive engine by reducing damage caused by cold starts.

We heat the cylinders, the oil, or both and we do it better than anyone else. We never leave cylinders unheated due to conflicts with your CHT sensors, and our aluminum sump heater makes silicone pads obsolete.

Our systems are also non-invasive... we don't replace any engine parts with ours.

"We were impressed with the performance... this system is an excellent value and is suitable for very cold conditions." -
